Financial Intermediation in a Less Developed Economy: The History of the United Bank of India is an institutional narrative of a bank in a developing economy, a representative case study that brings out the essential two-way relationship between finance and economic development. The book highlights that to understand financial intermediation, western theoretical models need to be complemented with institutional narratives of banking in developing economies, given the latter's specific foci. Thus, the authors choose a bank with significant history in a less developed economy and analyze over 50 years of the bank's balance sheet data. They trace the bank's growth in terms of the

transaction costs in managing risk, return and liquidity. The discourse also includes important case studies of borrowers after nationalization, a thorough analysis of financial intermediary organization and financial structure, reviews of certain banking policies and suggestion of a methodology to understand the financial history of less developed economies. This book will be of immense interest to policy makers, researchers and students working in the fields of economics of banking, financial history and development economics. This book has been designed for the use of science and engineering students of various universities. This book is slanted toward methodology and problem solving. Rahaman The edited volume brings out a comprehensive collection of information relevant to wild food plants, their importance for global sustainable food security, future-readiness, and resilient agriculture. The book's primary focus is to cover topics on the diversity of wild food plants across the globe, their nutraceutical importance, production-consumption trends, integration into the current food menu, and marketing and livelihood opportunities to the indigenous people. Sustainable development goals 1, 2, and 3 are significant for a poverty-free, hunger-free world and ensure good health and wellbeing of the people, respectively. The three goals are important and interlinked as achieving zero poverty will help reduce hunger among the people. Availability of nutritional and balanced food ensures good health. Wild food plants are an essential part of a nourishing and healthy diet for indigenous communities. They are globally collected from natural habitats or cultivated at more minor scales. Although consumed locally, they are an essential part of the diets of tribal and indigenous communities worldwide and hold immense potential to alleviate global hunger. Considering their importance for global sustainable food security, it is essential to clearly understand the future role of wild food plants for future readiness and resilient agriculture. Therefore, this book provides a piece of important information on these aspects. The book is a valuable resource for the audience ranging from undergraduate science students to the NGOs and institutions involved in poverty alleviation programs, policymakers, dieticians, horticulturists, plant breeders, farmers, health experts, and food enthusiasts. Mathematical Methods in Chemical and Biological Engineering describes basic to moderately advanced mathematical techniques useful for shaping the model-based analysis of chemical and biological engineering systems. Covering an ideal balance of basic mathematical principles and applications to physico-chemical problems, this book presents examples drawn from recent scientific and technical literature on chemical engineering, biological and biomedical engineering, food processing, and a variety of diffusional problems to demonstrate the real-world value of the mathematical methods. Emphasis is placed on the background and physical understanding of the problems to prepare students for future challenging and innovative applications. The book is an excellent reference for scientists, researchers and students working in the field of areas of biopolymeric biomaterials, biomedical engineering, therapeutics, tissue engineering and regenerative medicine. The book is divided into two parts: Part I will focus on the tissue engineering and Part II focuses on therapeutics, functionalization and computer-aided techniques. The book consists of 13 chapters contributed by 20 international contributors who are leading experts in the field of biopolymers and its applications. It will

focus on the advancements of chitin and chitosan in regenerative medicine. Regenerative medicine in tissue engineering is the process of replacing or regenerating human cells, tissues, or organs to restore or establish normal function. It is an incredibly progressive field of medicine that may, in the near future, help with the shortage of life-saving organs available through donation for transplantation vis-a-vis regenerative medicine focuses on therapeutics, functionalization and computer-aided techniques. It also covers physical and chemical aspects of chitin and chitosan, structural modifications for biomedical applications, chitosan based scaffolds and biomodelling in tissue engineering, nanomedicines and therapeutic applications. With the broad range of applications, the world is waiting for biopolymers to serve as the basis for regenerative medicine and biomedical applications. The years between the First and Second World Wars comprise a critical moment in the history of the world. In the aftermath of the First World War and the Bolshevik Revolution, individuals and countries sought new solutions and blueprints for a world of greater stability, equality, and interdependency. Their divergent ends and objectives were held together, if temporarily, by a euphoria for the vastness and integratedness of the world and the desire and optimism to remake it and shape the future of humanity. This volume highlights this period in the political and social mobilization that comprises the "internationalist moment," through the lens of South Asians' interactions with a wider world and the wider world's interactions with South Asia. The essays contribute to a growing, but as yet, inadequate field of the intellectual history of South Asia. "Bhagat Singh spent the last two years of his life in jail, awaiting execution. During this time, he and his comrades fought one of the most celebrated Court Battles in the annals of national liberation struggles, and used the court as a vehicle for the propagation of their revolutionary message. They also struggled against the inhuman conditions in the Colonial jail, and faced torture and pain. Their heroism made them icons and figures of Inspiration for generations to come. All this is well-known. What is not so well-known is that Bhagat Singh wrote four Books in jail. Although they were smuggled out, they were destroyed and are lost forever. What survived was a Notebook that the Young martyr kept in jail, full of notes and jottings from what he was reading. In the year of his Birth centenary, LeftWord is proud to present his Notebook in an elegant edition. This Edition has been checked against the copy preserved in the National Archives of India. The Notebook is richly annotated by Bhupender Hooja; and the annotations have

been revised and updated for this edition. Also included are the most important Texts that Bhagat Singh wrote in jail, Chaman Lal's lucid introduction, the New York Daily Worker's reports and Periyar's editorial on the hanging" - Provided by publisher. Volume 1 of this special issue of Lithos, dedicated to Roger Clement, presents papers describing the geology and emplacement of several of the recently discovered kimberlites in northern Canada in which diamond mines are now operating. Other papers are concerned with the petrography, age of emplacement, geochemistry and petrogenesis of kimberlites from Canada and other worldwide localities. Interrelated histories of colonial medicine, market and family reveal how Western homeopathy was translated and made vernacular in colonial India.
