The book presents a systematic study of coherent phenomena in molecule doped rare gas crystals, exemplified on bromine and iodine molecules in solid argon and krypton. Ultrashort laser pulses are applied to prepare vibrational wave packets on the molecules. Their dynamics is investigated via the pump-probe method. The principles of classical and quantum mechanical coherence are introduced in the first chapters together with the concepts of wave packet focusing and fractional revivals. Those are used to deduce the vibrational and electronic decoherence of molecular wave packets in the rare gas host. A novel coherent control scheme based on chirped laser pulse excitation is worked out to manipulate the wave packets. Furthermore, the molecular energy relaxation and the rotational behaviour in the rare gas host are discussed. Apart from the molecular wave packets, coherent phonons of the rare gas crystal are investigated via the pump-probe spectroscopy on the molecule. Those phonons are excited impulsively in a molecular electronic transition and modulate the host density close to the molecule. Due to the special probe situation, only coherent zone boundary phonons show up in the transients.

Fashion today is fast-paced, technologically savvy, and global - and this edition of 'The Dynamics of Fashion' has been updated to be on the cutting edge. Featuring the latest facts and figures, and the most current theories in fashion development, production, and merchandising, this text provides a broad foundation for students hoping to become a part of the industry. Apparel, accessories, cosmetics, home fashions, green design, and more are explored in detail. Hundreds of examples make the business aspect fun. This is the first integrated analysis of all aspects of security cooperation in western Europe from 1945 to 1991. It provides an accessible yet sophisticated survey of the wider dynamics of security cooperation in each decade throughout this period. It covers all aspects of security cooperation, which range from the political - such as a 'European' voice in arms control, to military - such as a 'European' input into NATO strategy, and economic - involving collaboration in defence technology and production. The reader will find in this volume the Proceedings of the NATO Advanced Study Institute held in Maratea-Acquafredda, Italy, between June 29 and July 12, 1997, entitled THE DYNAMICS OF SMALL BODIES IN THE SOLAR SYSTEM: A MAJOR KEY TO SOLAR SYSTEM STUDIES . This Advanced Study Institute was the latest in the 'Cortina' series of NATO ASI's begun in the early 1970's firstly under the directorship of Professor Victor Szebehely and subsequently under Professor Archie Roy. All, except the

latest, were held at the Antonelli Institute, Cortina d'Ampezzo, Italy. Many of those now active in the field made their first international contacts at these Institutes. The Institutes bring together many of the brightest of our young people working in dynamical astronomy, celestial mechanics and space science, enabling them to obtain an up-to-date synoptic view of their subjects delivered by lecturers of high international reputation. The proceedings from these institutes have been well-received in the international community of research workers in the disciplines studied. The present institute included 15 series of lectures given by invited speakers and some 45 presentations made by the other participants. The majority of these contributions are included in these proceedings. The central concept within the ebook "The Dynamics of Gender and Life" is the universe as a self-organizing system (SOS) wherein everything and everyone is engaged in an ongoing, dynamic, cyclical, interactive dance between unity and individuality, feminine and masculine, wave and particle, togetherness and separateness, Yin and Yang, possibility and actuality. The exploration of this interactive possibility-actuality, feminine-masculine dance yields valuable and useful insights into creativity, identity politics, personality structure, belief-systems, intuition, gender, spirituality, neuroplasticity, peak-states, health, well-being and more ... Some reviews "I liked (Stephen's) generalized summaries of what it all meant as I went along, e.g., 'We, and each

part within creation, are. . . an active pivot-point, a door-way, an active, creative portal through which the creative potential and power of the quantum vacuum, the implicate order, the ground of being, flows and creates. We are the delivery vehicles and directors of where and how that energy is congealed into actuality.' Beautifully expressed. These occasional "boosts" in his explication keeps the reader in touch with the overall context of what he is saying and sustains an emotional connection with the content. All in all, a wonderful piece of work, which I earnestly hope will reach a vast multitude of readers." Provides a clear understanding of the dynamics of typical people and of psychological type theory, as well as their practical use in real life. Understanding the Dynamics of Typical People is a humorous, and at the same time clear, systematic, and well-founded introduction to C. G. Jung's Type Theory. Written in an easy-to-understand conversational style, with examples, stories, vignettes, caricatures, and cartoons, the book will help you identify patterns that exist among people, patterns that make us "typical" while preserving each person's individuality. You will find yourself on these pages, as well as your friends, family, colleagues, and co-workers - and the clearer understanding of psychological type and dynamics gained from the book will signpost paths for continued growth and maturation. Examples of the practical applications of type theory at work and in other areas of life are provided throughout the book, as are references for further reading and investigation. Stress is a part of all of our lives that impacts on personality, and so in addition to the four well-known dimensions of psychological type - energy, perceiving, judging, lifestyle - the authors also look at stress and how the "typical" reactions to stress depend upon our personality preferences. Learn, for example, why during times of stress some people seem to fully ignore the details while others are most absorbed in them. This

easy-to-read and humorous book provides a clear understanding of the dynamics of typical people and of psychological type theory, as well as their practical use in real life. Summary: Starting from the central DYLAN question as to the conditions under which Europeans consider multilingualism as an advantage or as a drawback, the present chapter primarily discusses the historical aspects of European multilingualism. Methodically, many of the aspects dealt with are based on an analytical grid which illustrates the interrelations between the four research areas: "domains", "language attitudes", "language policies" and "contexts". The fifth area "transversal issues" (Geneva, Vienna, Berlin) and especially the aims of the Berlin research team run at right angles to this, touching. This is the second of a two-volume study of the dynamics of the MT version of the Book of Jeremiah. The first volume, published in 2017, analyzed chapters 1-25 and this volume will focus on chapters 25-52 of the MT version. As with the first volume, the aim of this one is to show the reader how, by paying attention to the 'Dynamics of the Text', namely how individual passages relate to their immediate and wider contexts, a new understanding of the book emerges. Rather than a loose collection of material assembled over a period of time by a variety of hands, one can discern how the parts of the book combine to portray the dramatic unfolding of Jeremiah's prophetic vocation, and how his relationship with God and God's people

form an integral part of the book's presentation of the Word of God. This book provides its readers with an introduction to interesting prediction and science dynamics problems in the field of Science of Science. Prediction focuses on the forecasting of future performance (or impact) of an entity, either a research article or a scientist, and also the prediction of future links in collaboration networks or identifying missing links in citation networks. The single chapters are written in a way that help the reader gain a detailed technical understanding of the corresponding subjects, the strength and weaknesses of the state-of-the-art approaches for each described problem, and the currently open challenges. While chapter 1 provides a useful contribution in the theoretical foundations of the fields of scientometrics and science of science, chapters 2-4 turn the focal point to the study of factors that affect research impact and its dynamics. Chapters 5-7 then focus on article-level measures that quantify the current and future impact of scientific articles. Next, chapters 8-10 investigate subjects relevant to predicting the future impact of individual researchers. Finally, chapters 11-13 focus on science evolution and dynamics, leveraging heterogeneous and interconnected data, where the analysis of research topic trends and their evolution has always played a key role in impact prediction approaches and quantitative analyses in the field of bibliometrics. Each chapter can be read independently, since it includes a detailed

description of the problem being investigated along with a thorough discussion and study of the respective state-of-the-art. Due to the cross-disciplinary character of the Science of Science field, the book may be useful to interested readers from a variety of disciplines like information science, information retrieval, network science, informetrics, scientometrics, and machine learning, to name a few. The profiles of the readers may also be diverse ranging from researchers and professors in the respective fields to students and developers being curious about the covered subjects. What impact do news and political advertising have on us? How do candidates use media to persuade us as voters? Are we informed adequately about political issues? Do twenty-first-century political communications measure up to democratic ideals? The Dynamics of Political Communication: Media and Politics in a Digital Age, Second Edition explores these issues and guides us through current political communication theories and beliefs by detailing the fluid landscape of political communication and offering us an engaging introduction to the field and a thorough tour of the discipline. Author Richard Perloff examines essential concepts in this arena, such as agenda-setting, agenda-building, framing, political socialization, and issues of bias that are part of campaign news. Designed to provide an understanding and appreciation of the principles involved in political communication along with methods of research and hypothesis-testing, each chapter

includes materials that challenge us by encouraging reflection on controversial matters. Inside this Second Edition you'll find: Expanded discussion of conceptual problems, communication complexities, and key issues in the field. New examples, concepts, and studies reflecting current political communication scholarship. The integration of technology throughout the text, reflecting its pervasive role in the political spectrum. Accompanied by an updated companion website with resources for students and instructors, *The Dynamics of Political Communication* prepares you to survey the political landscape with a more critical eye, and encourages a greater understanding of the challenges and occurrences presented in this constantly evolving field. This new text/reference is an excellent resource for the foundations and applications of control theory and nonlinear dynamics. All graduates, practitioners, and professionals in control theory, dynamical systems, perturbation theory, engineering, physics and nonlinear dynamics will find the book a rich source of ideas, methods and applications. With its careful use of examples and detailed development, it is suitable for use as a self-study/reference guide for all scientists and engineers. It was our privilege, some twenty years ago, to assemble a group of Canadian and American investigators to examine the status of research in the then newly burgeoning field of psychological stress (Appley & Trumbull, 1967). As noted, in Chapter 1 of the present volume, there has

been rapid development of the area since then. The conference on which the current volume is based was designed to do three things: 1. to further update the field, 2. to bring European and other perspectives to the subject, and 3. to focus on the status of theory of stress. We believe the reader will agree that all three objectives were accomplished, though in so vast and active a field, one can never be totally satisfied. The authors included in this volume are among the leading investigators in the field. They represent active research centers and programs in Austria, East and West Germany, Great Britain, Israel, Sweden, and the United States. Their chapters make contributions to stress theory and methodology, inform us meaningfully of the perspectives of the various research programs they represent, and provide, collectively, a description of the dynamics of the stress process as currently emerging. This book offers a comprehensive assessment of the major theoretical approaches to the study of American politics. Written by leading scholars in the field, the book's essays focus particularly on the contributions that competing macro- and microanalytic approaches make to our understanding of political change in America. The essays include systemat This book sets forth and builds upon the fundamentals of the dynamics of natural systems in formulating the problem presented by Jacobi in his famous lecture series "Vorlesungen tiber Dynamik" (Jacobi, 1884). In the dynamics of systems described by models of

discrete and continuous media, the many-body problem is usually solved in some approximation, or the behaviour of the medium is studied at each point of the space it occupies. Such an approach requires the system of equations of motion to be written in terms of space co-ordinates and velocities, in which case the requirements of an internal observer for a detailed description of the processes are satisfied. In the dynamics discussed here we study the time behaviour of the fundamental integral characteristics of the physical system, i. e. the Jacobi function (moment of inertia) and energy (potential, kinetic and total), which are functions of mass density distribution, and the structure of a system. This approach satisfies the requirements of an external observer. It is designed to solve the problem of global dynamics and the evolution of natural systems in which the motion of the system's individual elements written in space co-ordinates and velocities is of no interest. It is important to note that an integral approach is made to internal and external interactions of a system which results in radiation and absorption of energy. This effect constitutes the basic physical content of global dynamics and the evolution of natural systems. Designed to help life sciences students understand the role mathematics has played in breakthroughs in epidemiology, genetics, statistics, physiology, and other biological areas, *MODELING THE DYNAMICS OF LIFE: CALCULUS AND PROBABILITY FOR LIFE SCIENTISTS*, Third

Edition, provides students with a thorough grounding in mathematics, the language, and 'the technology of thought' with which these developments are created and controlled. The text teaches the skills of describing a system, translating appropriate aspects into equations, and interpreting the results in terms of the original problem. The text helps unify biology by identifying dynamical principles that underlie a great diversity of biological processes. Standard topics from calculus courses are covered, with particular emphasis on those areas connected with modeling such as discrete-time dynamical systems, differential equations, and probability and statistics. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version. First published in 1982. CRC Press is an imprint of Taylor & Francis. This empowering guide goes beyond observable techniques to offer a close look at the creative internal processes--both cognitive and psychological--that successful mediators and other conflict resolvers draw upon. An authority on the psychological interpretation of the visual arts directs attention to the expressive visual features of buildings and the perceptual consequences of architecture. In *The Dynamics of Policy Implementation in Nigeria*, author Mohammad Ahmad Wali examines the implementation of public policy in Nigeria with an emphasis on Sokoto State from 1976 to 1991, from the perspective of an insider.

Thoroughly documented and researched, *The Dynamics of Policy Implementation in Nigeria* first dissects the explanations provided for both the success and failure of the government's efforts at moving policy forward. Wali specifically investigates the Operation Move Ahead education policy that has failed to achieve its objectives. A comprehensive presentation of the region's history, religion, politics, and socioeconomic structure provides the background from which to analyze the issues. With charts and diagrams, Wali discusses the four main obstacles to implementation in the Sokoto State bureaucracy: governmental instability, governmental overload, socioeconomic problems, and the infrastructural inadequacies confronting policy implementers. The crucial role of implementation analysis is to identify the factors which affect the achievement of policy objectives. The discovery of rules for the systematicity and dynamics of terminology creations is essential for a sound basis of a theory of terminology. This quest provides the driving force for *The Dynamics of Terminology* in which Dr. Kageura demonstrates the interaction of these two factors on a specific corpus of Japanese terminology which, beyond the necessary linguistic circumstances, also has a model character for similar studies. His detailed examination of the relationships between terms and their constituent elements, the relationships among the constituent elements and the type of conceptual

combinations used in the construction of the terminology permits deep insights into the systematic thought processes underlying term creation. To compensate for the inherent limitation of a purely descriptive analysis of conceptual patterns, Dr. Kageura offers a quantitative analysis of the patterns of the growth of terminology. His fascinating and unique contribution to our understanding of the terminological process reveals the powerful interaction of linguistic possibilities and the naming process of conceptual entities. An introduction to the field of mass communication, covering all the major media, from books, magazines and newspapers, to radio, film, TV, cable and the new technologies. Illustrated with examples and anecdotes, the book explores international communication and career opportunities in the media. *Biology: The Dynamics of Life, Laboratory Manual* This book deals with the construction of diverse forms of humor in everyday oral, written, and mediatized interactions. It sheds light on the differences and, most importantly, the similarities in the production of interactional humor in face-to-face and various technology-mediated forms of communication, including scripted and non-scripted situations. The chapters analyze humor-related issues in such genres as spontaneous conversations, broadcast dialogues, storytelling, media blogs, bilingual conversations, stand-up comedy, TV documentaries, drama series, family sitcoms, Facebook posts, and internet memes. The

individual authors trace how speakers collaboratively circulate, reconstruct, and (re)frame either personal or public accounts of reality, aiming –among other things– to produce and/or reproduce humor. Rather than being “finished” products with a “single” interpretation, humorous texts are thus approached as dynamic communicative events that give rise to diverse interpretations and meanings. The book draws on a variety of up-to-date approaches and methodologies, and will appeal to scholars in discourse analysis, conversation analysis, interactional sociolinguistics, pragmatics, ethnography of communication, and social semiotics. A rich and abundant literature has developed during the last half century dealing with mechanical aspects of the eye, mainly from clinical and experimental points of view. For the most part, workers have attempted to shed light on the complex set of conditions known by the general term glaucoma. These conditions are characterised by an increase in intraocular pressure sufficient to cause de generation of the optic disc and concomitant defects in the visual field, which, if not controlled, lead to inevitable permanent blindness. In the United States alone, an estimated 50,000 persons are blind as a result of glaucoma, which strikes about 2% of the population over 40 years of age (Vaughan and Asbury, 1974). An understanding of the underlying mechanisms of glaucoma is hindered by the fact that elevated intraocular pressure, like a runny nose, is but a symptom

which may have a variety of causes. Only by turning to the initial pathology can one hope to understand this important class of medical problems.
